

## TRAINING PROGRAMS

Discussion of developing, changing, or updating an EIS is really a discussion of transformation. Once installed and activated, the system and its environment can produce information and insights that will affect the company's strategy, operations, and results. This will introduce a major process change that will require a **comprehensive training program** to both executives and IT staff to respond to the changes.

TRAINING

COMMUNICATION

---

*EIS Consultants* promotes programs of **training and maintenance** of the developed systems to perpetuate their utilization and updating capabilities. Executives, motivated by the successful testing of the power of information at their fingertips, will increase their demand for sophisticated data, information, and analysis. *EIS Consultants*, through these programs, assures the health of the implemented system and the training of the staff, who will respond to everyday challenges better prepared

---

The successful implementation of an EIS alone does not guarantee that the project be a success, it is necessary that the company is willing to establish a program of information and training that becomes known to the entire organization.

Ensure this step is a commitment of *EIS Consultants*, that are aligned with the vision of continued maintenance and support to the executive.

## Maintenance and Enhancement

Develop an EIS is not a *project* is a *process*.

One day after the start, is the right moment to pause and realize how and what you did. If the project is well executed and what impact it is having on the company.

PREVENTING MAINTENANCE

EIS Consultants develop an overall project review to ensure success

Communication is the key to support any proposed Executive Information System, **EIS Consultants** promotes training and information plans to maintain a healthy system and users updated.

To keep updated an EIS and maintain a high usability, EIS Consulting develops a range of activities among which are:

- Evaluation the data health, transfers and processes.
- Monitoring the response time of queries and analysis processes.
- Diagnostics and tuning to ensure database upgrades and reliability.
- Programs of hardware and software upgrade.
- Procedures for identification and integration of business changes, new information required and changes in leadership. Constant monitoring of changes in business environment and strategic needs of the market to counteract deviations.
